SUMMARY

Motivated computer science student with strong interest in machine learning and artificial intelligence. Experienced in developing predictive models and implementing deep learning algorithms using Python, TensorFlow, and scikit-learn. Passionate about leveraging data-driven solutions to solve real-world problems. Seeking opportunities to apply ML expertise in research or industry settings.

PROFESSIONAL EXPERIENCE

Machine Learning Intern

June 2025 – August 2025

Smart Controls India Ltd., Gwalior, Madhya Pradesh

(Mode of internship: Hybrid)

- Developed Proof of Concept (POC) for SG+, an Industrial IoT platform enabling real-time data acquisition, OEE monitoring, and downtime analysis.
- Implemented seamless MES/SAP integration for the IIoT platform, improving data flow and operational visibility.
- Studied AI/ML-based anomaly detection models for tire curing press operations to identify potential equipment failures early.

Machine Learning Intern

September 2024 – December 2024

Skill Enhanced Private Limited, Noida, Uttar Pradesh

(Mode of internship: Online)

- Built behavioral anomaly detection models to identify suspicious network traffic patterns.
- Created NLP-based models to classify phishing emails and malicious URLs with 90% precision
- Created models to identify fraudulent credit card transactions (99% Accuracy).

EDUCATION

Bachelor of Technology in Computer Science Engineering

2022 - 2026 (Expected)

Rajasthan Technical University, Kota, Rajasthan

CGPA: 9.28

SKILLS

Technical Skills: Python Programming, Machine Learning, Data Analytics, C++ Programming, Database Management (MySQL)

Frameworks: Keras, Scikit-Learn, OpenCV, Numpy, Pandas, NLTK, Streamlit, Seaborn

Soft Skills: Leadership, Communication, Problem-Solving, Team Collaboration

CERTIFICATIONS

Data Science Certification Course – IIT Guwahati

February 2025 - February 2026 (Expected)

Meta Data Analyst Professional Certificate – Meta

January 2025

PROJECTS

Facial Detection and Recognition System along with Liveness Detection

- Built real-time recognition system capable of identifying multiple faces simultaneously which achieved 94%+ accuracy.
- Developed deep learning-based liveness detection model to distinguish real faces from spoofing attacks.

Movie Recommendation System

- Built content-based recommender using movie metadata (genres, cast, director, plot, keywords)
- Implemented TF-IDF vectorization on movie descriptions and tags for similarity computation
